

How to Access my AI Tools?

Once you choose your preferred plan, you'll receive a welcome email to start your training tutorials. You'll gain access on **TradingView** within 48 hours. TradingView offers a free plan, but please note that the free plan does not support alerts or signal notifications. We do not store payment credentials; they are encrypted and passed to **Stripe** for secure subscription processing on our site.

Which plan should I choose?

The **Advanced SMC Toolkit** is the most popular choice as it includes three AI trading tools for any trading style (scalping, intraday, and swing trading). If you're focused solely on scalping and have access to competitive spreads and low trading fees, the **Easy Scalping AI Toolkit** is suitable. Keep in mind that using higher timeframe indicators provides scalping users with better situational awareness, improving risk-reward ratios and win rates. Both plans include training tutorials.

What markets are supported?

Our indicators work on any market available through TradingView CFD brokers (Forex, Crypto, Commodities). For trading **Crypto**, please use forex CFD broker charts such as **IC Markets**, **Oanda**, **BlackBull Markets**, etc.

What timeframes are supported?

The indicators automatically perform multi-timeframe analysis, but execution occurs on the following timeframes: **1m for scalping**, **15m for intraday**, and **1h for swing trading**.

Do your tools work on trading platforms other than TradingView?

Our toolkits work exclusively on **TradingView** (a free web-based charting platform), but you can execute trades on any platform in real-time based on TradingView charts. If you are using **MT4**, you can download our **SMC Trade Manager** for free: [SMC Trade Manager](#).

Will I become consistent trader using your AI tools?

While our AI tools provide clear key levels for entry and exits, consistency and great results depend on your understanding of the tools. This involves following a process of:

1. Study and take notes
2. Historical backtesting
3. Bar Replay
4. Real-time testing
5. Demo trading before going live.

Success relies entirely on the trader's proper risk management, patience, and discipline when using the tools and concepts.

Why am I paying for the first 3 months in advance? Do you offer free trials?

We focus on continuously improving our trading tools rather than releasing new fancy products frequently. Success or failure depends on you and your self-development; you are the "pilot," and we provide the best "aircraft" and tutorials, which are your trading tools. We believe that dedicating at least 3 months to these system adds value and focus for our clients. Furthermore, we offer a limited number of licenses because we value our clients' edge in the market.

Are your indicators beginner-friendly?

Yes, and in fact, we believe that disciplined beginners may have an advantage when using AI trading tools because they don't carry over the "bad" habits that more experienced traders often have.

Can I change or cancel anytime?

Yes, you can upgrade, cancel, or extend your plan at any time. If you want to downgrade, simply cancel your current plan and start a new **Easy SMC** plan from scratch. For upgrades, we convert the remaining time into a value of days on your new plan. If you want to avoid monthly payments, you can opt for a **lifetime license**.

Are there any limitations on my licenses?

This product is for personal use, including **personal prop firm challenges**. However, your license does not permit the use of notifications as a signal provider or if you are a fund employee or manager. **Corporate licenses** are available upon request. For more details, please refer to the license agreement.
